

CLAIMS

What I claim my invention is:

1. The Exhibit Framing System is an original concept, a systemic approach to providing framing for exhibits the object of which is the reuse of existing resources in a planned, purposeful and deliberate manner.
2. The Exhibit Framing System permits the exhibition and the frequent, temporary or periodic rotation of artifacts of varying sizes at a cost far inferior to custom framing and reduces preparation times.
3. The use of the invention results in a unified cohesive appearance throughout the exhibit. Aesthetically proportioned presentation is achieved both initially and in subsequent rotations of various artifacts, conforming to specified parameters.
4. Subsequent showings of previously displayed artifacts are achieved without additional expenditure.
5. The Exhibit Framing System makes leasing or renting of frames and framing economically feasible, which can benefit both the supplier/fabricator entity and the exhibiting institution entity.
